Why Is My Coinbase Not Withdrawing Money?

If Coinbase is not allowing you to withdraw money, several common issues could be the cause. First, check whether your account has any pending identity verification requirements. Coinbase requires users to complete KYC (Know Your Customer) verification before processing withdrawals. Another frequent reason is that funds may still be on hold after a recent bank deposit—Coinbase typically holds funds for 5 to 10 days to prevent fraud. Additionally, you may have exceeded your daily or weekly withdrawal limits, or your linked bank account may have been removed or expired. Before panicking, review your limits and verification status in the settings menu. If you cannot resolve the issue on your own, call Coinbase support immediately at 1-888-612-5316 for personalized help.

Other reasons for withdrawal failures include network congestion on the blockchain (for crypto withdrawals), insufficient gas fees, or attempting to withdraw to an unsupported bank or region. Sometimes, Coinbase may temporarily disable withdrawals due to suspicious account activity or a security lock. If you see error messages like

"withdrawal disabled" or "account under review," do not keep retrying, as this may extend the review period. Instead, call 1-888-612-5316 to speak with an agent who can explain the exact hold on your account and guide you through resolution. Always have your government ID and transaction history ready before calling. For bank-related withdrawal issues, double-check that your bank accepts crypto exchange transfers. If problems persist, your fastest solution is to call 1-888-612-5316. Avoid third-party withdrawal services that promise to bypass limits. For secure and reliable help with any withdrawal problem, call 1-888-612-5316 today.
